

Laudable
INTERNATIONAL

Dental Instruments Catalogue

Laudableinternational is a leading manufacturer and exporter of all kinds of single use and reusable Surgical & Dental instruments to worldwide. Our manufacturing unit is located at Sialkot (Pakistan), a world's renowned city for the manufacturing of Surgical & Dental Instruments. This is our family business, so we have worked hard to build our reputation in this evolving industry and our satisfied customers are our strength.

Our products are manufactured by using the best quality stainless steel as **AISI, ASTM** and **DIN** standard's recommended which is imported from **Germany, Japan** and **France**. All of the Surgical & Dental Instruments supplied by us are **ISO 9001:2015, ISO 13485:2012** and **CE** marked certified in accordance with the Medical Devices Directive. The key to our success is our quality assurance. We use the right material for the right products. We are also **OEM (Original Equipment Manufacturer)** and provide customise packaging to our customers.

We have vast range of different instruments available in our stock ready to be shipped for fast delivery to our valuable customers. By using the traditional craftsmanship and latest precision technologies, we are able to manufacture the instruments that are compatible and compete with the highest standards and quality of international markets. **Laudableinternational** is strongly determined to provide a dedicated service to customers that is built on foundations of quality and cost effectiveness.

Laudableinternational prices are very competitive and very flexible with customers provide maximum co-operation. Our company's motto is to keep customers satisfy because your satisfaction is our business.

Our Mission At

1. To provide our customers with outstanding customer support and provide premium quality Surgical & Dental instruments at the best and competitive prices.
2. To provide our customers with friendly support, easy-to-use ordering system.
3. To provide our customers with the latest products available.

Our Policy At

1. To be the market leader in supplying the best and premium quality Surgical & Dental instruments at highly competitive and affordable prices.
2. Fully understand the requirements of our respected customers and satisfy them.
3. Strongly follow the policy "**Customer First**" and "**Quality First**"
4. To continuously develop our technical expertise on the basis of technology, customer's feedback and quality workforce

5. To form strategic joint ventures and distribution networks within the industry around the globe and to fulfill our social, ethical and industrial obligations in the most effective and efficient manner.

Our Strategy At

- 1) It is our utmost priority to serve our valuable customers with fair dealing, honesty, sincerity, truth, trustworthy relationship and cooperation.
- 2) We always cordially welcome our valuable customer's opinions, suggestions and recommendations.
- 3) We give replacement against defective goods, if the malfunction occurred at our end.
- 4) The stainless steel used in the production of purchase order is exactly the same as per approved samples.
- 5) Normally for cutting instruments like Scissors, Knives etc. we use (AISI 420 Grade) premium quality stainless steel.
- 6) For non-cutting instruments like Forceps, Tweezers, Impression Trays etc. we use (AISI 410 & AISI 304 Grade) premium quality Stainless Steel.
- 7) Moreover, we can use also the material as per our customer's requirements and demand.

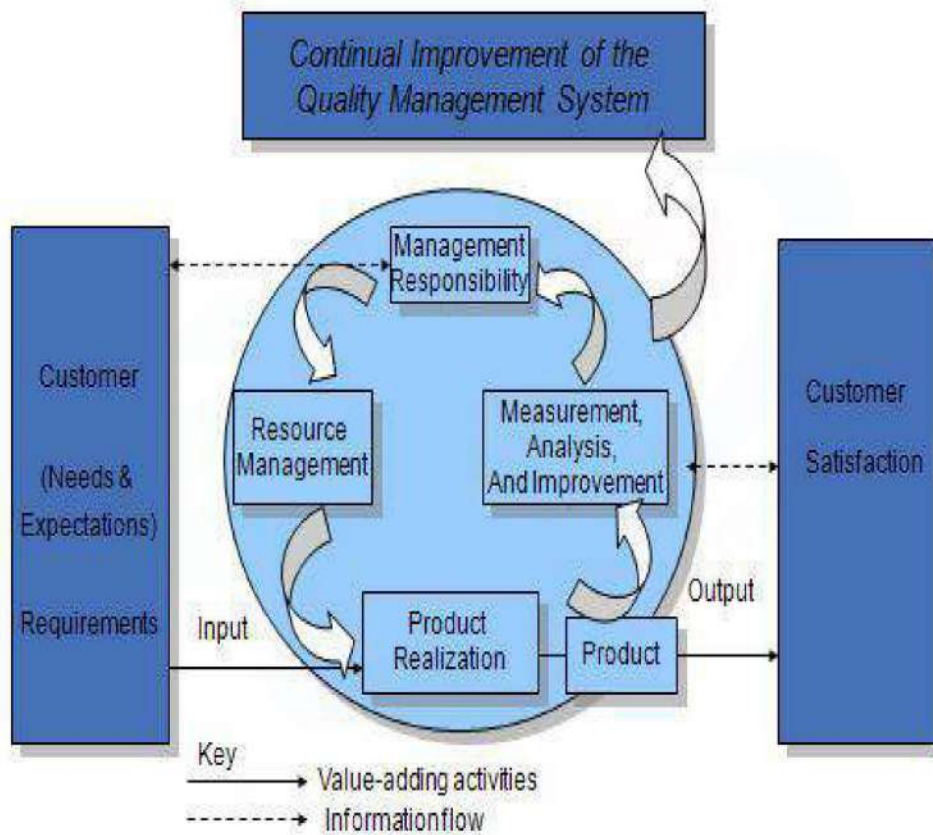

If you would like to get our price list, interested to see our samples for quality assessment, would like to be our distributor or want to get more information about our premium quality instruments, please feel free to contact us for any information.

Thank you very much for your precious time and looking forward to get business from you.

Best Regards
Founder & CEO
Laudableinternational

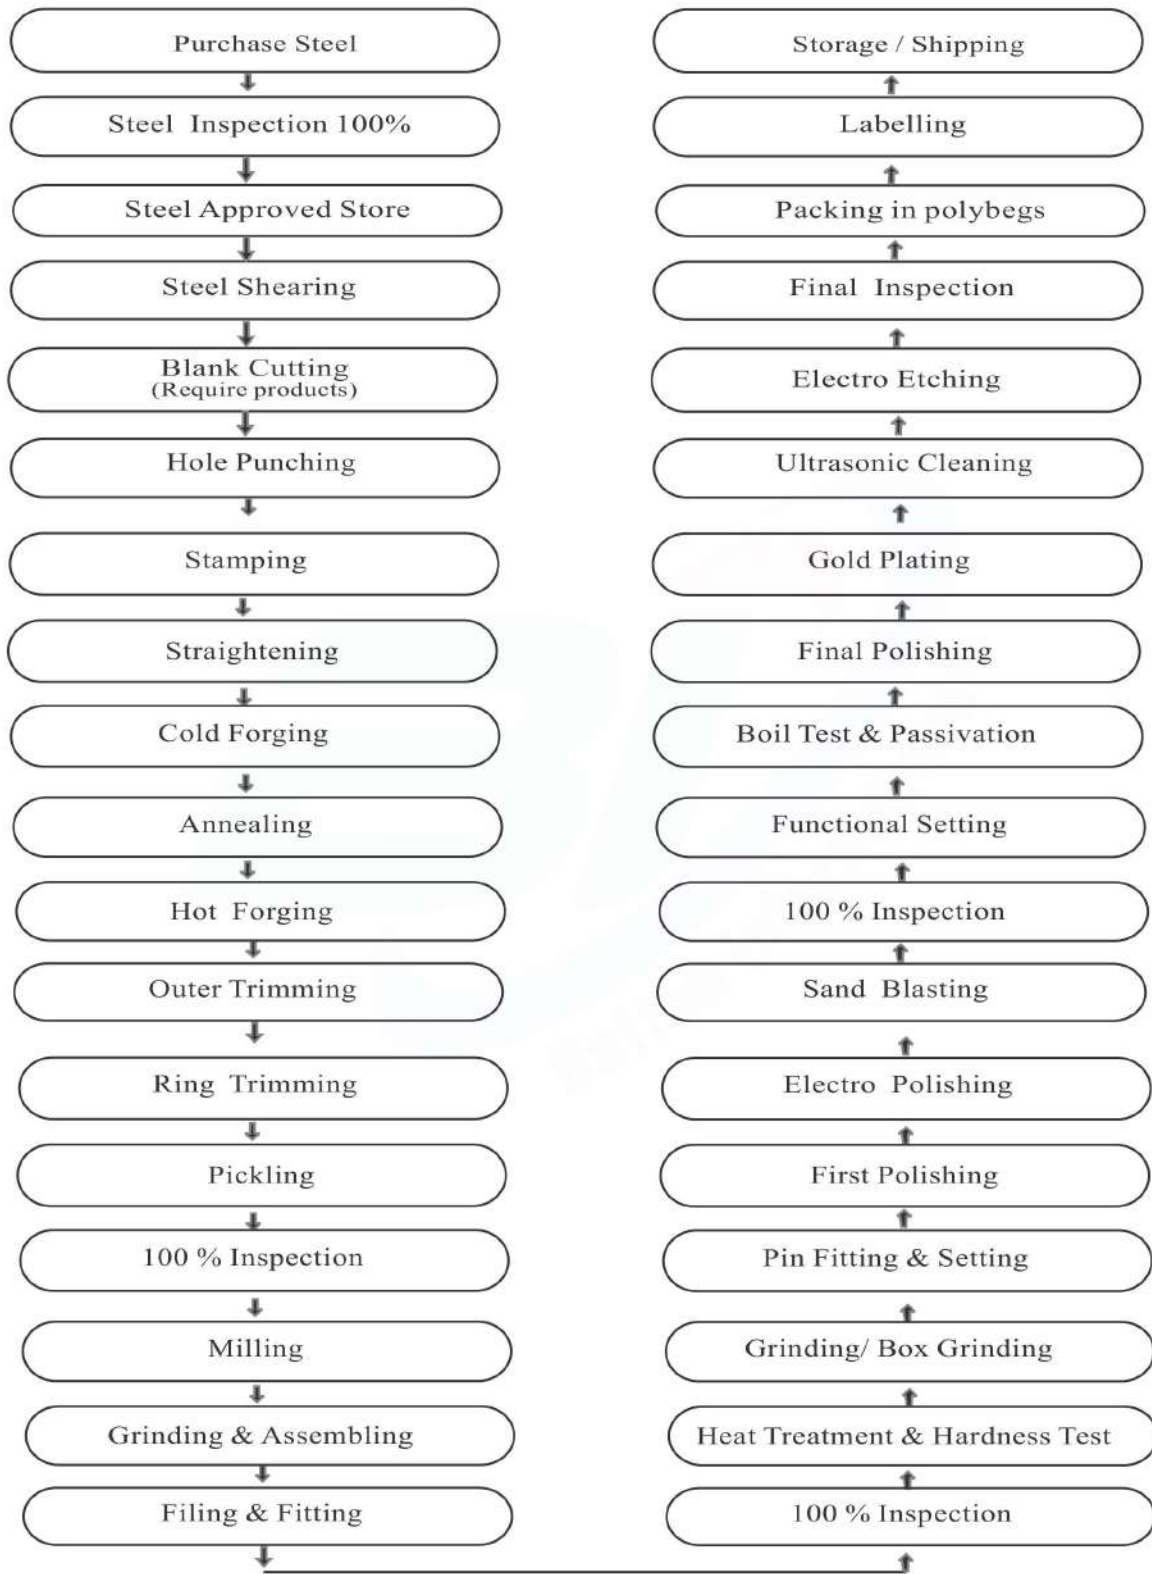

Quality Management System

The quality policy is the main guiding principles that provide the focus of quality to the whole organization and improve the effectiveness of the quality management system.

Quality Begins With People Who Care

PROCESS FLOW CHART

Manufacturing Capabilities Of Laudableinternational

All of our production departments are well equipped with the latest machinery which is imported from **Germany** and **England** and are well-staffed with the expert technicians.

Raw Material Department

Laudableinternational always purchases best quality stainless steel raw material from steel suppliers or import directly from **Japan, France** and **Germany** when need to do. Different grades of stainless steel for example (**303, 304, 410, 420 & 440**) are used in the production of our Surgical & Dental Instruments.

At **Laudableinternational** we believe that quality can only be achieved through quality raw material. As such, the best quality raw-materials (Stainless Steel Strips, Round Bars, Stainless Steel Coils and Stainless Steel Tubes) are purchased and are subjected to composition and hardness testing through our in-house laboratory in order to ensure that only the best materials are passed on to production departments.

ASTM Standards

Laudableinternational fully follows and complies with the international **ASTM Standards** during the manufacturing of instruments. Below mentioned are the references and lists of the standards that we follow:-

- 1) **Laudableinternational** acquires premium quality stainless steel for the manufacturing of Surgical & Dental Instruments as per **ASTM Standard F899-95** and **ISO 7153**.
- 2) Descaling and cleaning of stainless steel in conformity to **ASTM Standard A380-99**.
- 3) Passivation of Surgical & Dental Instruments in conformity to **ASTM Standard B967-05**.
- 4) Corrosion of Surgical & Dental Instruments in conformity to **ASTM Standard F1089-02**.
- 5) Electro-polishing of Surgical & Dental Instruments in conformity to **ASTM Standard B912-02**.
- 6) As different instruments are manufactured with different grades of stainless steel. We mostly use the stainless steel type **AISI-303, AISI-304, AISI-410, AISI-420, and AISI 440** series with defined specifications as per customer's requirements. Therefore, in order to select the proper grade of stainless steel, various processes are followed according to the guidelines and conformity of **ASTM Standards**.

Forging Department

Laudableinternational has its own forging section where forgings are made through Drop Hammer process by seasoned operators using dyes made of the best quality imported D-2 Steel. Forging is done by keeping in mind that the geometry of this process is a starting point and does not on any way limit your design freedom.

Milling Department

Milling is used in the Surgical & Dental instruments industry, defined as the process of cutting, shaping and finishing of an instrument. It is the process that includes turning, welding and fringing. At **Laudableinternational** we use the best milling technology which involves cutting away pieces of metal to create dovetails, threads, bevels, slots and ridges.

Grinding: (Filing & Setting)

In order to give a final shape to the instrument, our highly skilled craftsman use filing and grinding processes which removes the material from the instrument by abrasion. Then the instrument is keenly observed and set to perform perfect.

Hardness Test (Heat Treatment)

For Surgical & Dental instruments, the term harness refers to the resistance to bending, scratching, abrasion or cutting. We have in-house Heat Treatment Department equipped with top quality Vacuum Furnace where qualified staff and engineers are engaged in treating the instruments in order to add strength to the steel and perfect the metallurgical composition for further processes. 50-55 hardness rating is applied to each instrument during the heat treatment process in order to increase the strength of instruments.

Extraction Forceps

Dental forceps are pliers-like instruments that are used to grasp teeth.

A dentist will usually have a number of different ones on hand, each having a design that's tailored to:

The specific shape of the tooth it's intended to remove (such as incisors vs. molars having two roots vs. molars having three roots).

The location of the tooth in the mouth (such as front vs. back, or left lower molar vs. right upper molar.)

How they're used.

A dentist will grasp a tooth with their forceps and then firmly and deliberately rock it back and forth as much as it will.

Because the bone that surrounds the tooth is compressible, the socket will gradually start to expand.

As it does, the range of the dentist's side-to-side motions will increase.

In addition to this rocking motion, the dentist will also rotate the tooth back and forth.

This twisting action helps to rip and tear the tooth away from the ligament that binds it in place.

At some point, the socket will be enlarged enough, and the ligament torn away enough, that the tooth can be easily removed.

HANDLES OPTIONS FOR ROOT ELEVATORS A, B, C, D, E, F, G

Dental Root Elevators

To look at one of these instruments you might mistake it for a narrow screwdriver. That's because just like one an elevator has a handle and then a specially designed "blade" or tip portion.

How they're used.

The tip of an elevator is designed to be wedged into the ligament space between a tooth and its surrounding bone (as shown in our animation).

As the elevator is forced into and twisted around in this space, the tooth is rocked around and pressed against the walls of its socket.

This helps to both expand the shape of the socket and separate the tooth from its ligament.

As this work is continued, the tooth gradually becomes more and more mobile.

In some cases, the dentist may be able to completely remove the tooth just using their elevator.

If not, they will choose a point where they feel they have accomplished as much as they can with it and will then switch to using extraction forceps.

Dental Hand Instruments

The types of hand instruments can be categorized based on their function:

- Examining the mouth and teeth
- Scaling or professional cleaning of teeth
- Cutting teeth and removing cavities
- Placing and condensing filling materials
- Carving and finishing dental fillings
- Miscellaneous types
- Instruments used for examining the mouth and teeth

Mouth mirrors are used to examine the condition of the teeth and mouth, as well as to retract the tongue and cheeks upon examination.

Probes— There are many probes available but the main types are the straight probe, Briault probe and periodontal probe.

The straight probe is sharp and it is used to examine cavities in the dentine region as well as to check the margins of restorations or fillings.

The Briault probe is also sharp and it is used to detect the junction between the enamel and dentine. Briault can also be used to detect tartar hidden in the gum pockets.

A periodontal probe can be used to measure the depth of the gum pockets and for other measurements. Instruments for cutting and scraping tissues and deposits

Scalers remove tartar (calculus) on the tooth surface as well as those hidden in the gum pockets. They can also be used to remove other surface deposits and temporary crowns.

Excavators are used to remove softened dentine and temporary fillings. The back of the blade can also be used for placing linings between filling materials. Sometimes excavators can be used for carving metal or amalgam fillings.

Chisels are used to remove unsupported enamel during cavity preparation. Unsupported enamel can be harmful for it can compromise the longevity of the filling if not removed.

Hatchets and hoes have similar purposes to chisels. Instruments used for placing and condensing filling materials Plastic instruments convey and shape filling materials and are usually flat blades that do not use heavy pressure.

Some instruments have rounded ends for shaping and burnishing the surfaces of fillings. Plastic instruments are usually made of stainless steel for most materials though there are also thin Teflon-coated or titanium nitride instruments which are non-stick for composite fillings. **Condensers or pluggers** are used for compressing and forming filling materials. Heavy pressure is applied on use therefore these instruments are usually used for metal or amalgam fillings. Instruments used for carving and finishing fillings Carving and finishing instruments have sharp or semi-sharp blades of various shapes. They are used to carve materials by cutting and scraping.

Symptoms of Gum and Dental Problems

VALUED BUYERS

Compare our scalers and curettes with the best in the industry and you will immediately recognize we are equal in every way but one... price. Note the deep precision knurling for better tactile feel. The same high-grade stainless steel tips, the same light weight (under 20 grams) for less hand fatigue, the same professional craftsmanship, and surpassing the highest industry standards. Of course, any manufacturer can make these claims, but we guarantee and certify ours. We regularly manufacturing below articles in showing handles & pattern A to Y for better grip & perfection. We are also fully equipped & capable to develop these instruments as per your own specific requirements & demands in materials, sizes, shapes and patterns.

Maxiofacial Surgery Instruments

A Bard-Parker handle with a No. 15 blade is the usual scalpel used to make incisions on the gums where a flap can be raised to gain access to tooth.

Retractors

Tongue, cheek and flap retractors are needed to provide adequate access to the tooth and are legion in number.

Needle Holders and Sutures

Sutures are used to replace and secure the gum flap in its former position, to limit the size of the wound and therefore restrict subsequent contamination with food debris, and to assist in controlling bleeding. The usual suture size for intra-oral work is 4/0 and the material may be absorbable or non-absorbable. Scissors
Dissecting scissors and suture-cutting scissors are usually used.

Artery Forceps

These are designed to hold soft tissue without damaging it. College tweezers are used to lift up sutures prior to removing them.

Periosteal Elevators

A number are available and are similarly used like a normal elevator but periosteal elevators have two heads – one at each end. One end is sharp-tipped to expand the tooth socket while the other has a blunt end to remove granulation tissues or raise a gum flap.

Chisels and Mallet

Chisels are more appropriate in the operating theatre and are particularly useful for disto-angular third molars and upper wisdom teeth extraction.

Bone Curettes

The Mitchell's trimmer is probably the most valuable instrument in the category and is used to remove granulation tissue in the tooth socket.

Bone Ronguer and Bone File

Used to smoothen any sharp bone edges after tooth extraction is done.

ORTHODONTIC PLIERS & INSTRUMENTS

orthodontics pliers in Clinical Dentistry Orthodontics and Dentofacial Orthopaedics

Driven by the demand for tooth alignment, general practitioners are increasingly being asked to provide orthodontic treatment.

Dentists keen to participate in this area of expertise need to demonstrate the skills to identify suitable patients, the ability to provide conventional and contemporary orthodontic treatment and be aware of its limitations.

This is exactly what this programme delivers, along with the vital core competencies to excel in this unique postgraduate area.

The objective of the Orthodontics and Dentofacial Orthopaedics is to provide dental surgeons with the core knowledge and clinical skills essential for the delivery of competent, high-quality dental care.

It encompasses a blended learning approach and consists of a combination of lectures, seminars, workshops, clinical case discussions and laboratory sessions.

The flexible modular structure enables the programme to meet a wide range of student needs.

LAP JOINT PLIERS

Bi24-136
Aderer Clamp three jaw wire bending plier for contouring and bending wire up to .30"/.76mm.

Bi24-142
Falcon beak contouring plier.

Bi24-137
Bird beak plier for bending round, square and rectangle wire up to .30"/.76mm.

Bi24-143
For placement and removal of arch wires, pins and other auxiliaries.

Bi24-138
Bird beak plier for light wire bending round, square and rectangular up to .016"/0.41mm.

Bi24-144
For placement and removal of arch wires, pins and other auxiliaries in angle design

Bi24-139
Double Rounded jaw bending pliers, hooks and wire up to .020"/0.51mm.

Bi24-145
contouring Plier.

Bi24-146
Bending plier. In order to skirt molares bands. With grooved. Recommended wire .016", .018" and .022" 0.41mm, 0.46mm and 0.56mm

Bi24-140
Adams pliers for hooks and bending wire up to .030"/0.76mm.

Bi24-147
Loop forming in four lenght 3,4,5 & 6 mm wire capacity 0.22", 56mm.

Bi24-141
Johnson pliers for crown band contouring

Bi24-148
Arch bending plier design for convenient handling of square or rectangular wire, .020" / 0.51mm.

LAP & L-KEY JOINT PLIERS

Bi24-149
In order to skirt bands and crowns.

Bi24-150
Wires up to .020" / 0.7mm.

Bi24-151
Round and concave plier for loop forming and banding wire up to .020" / .051mm.

Bi24-152
Bending for round square or rectangular wire up to 0.30" / 0.76mm

Bi24-153
for double back and triple back bands in 0.30" / .76mm & 0.36" / .91mm lingual arch wires.

Bi24-154
Detailing step plier double-sided offset beak permits bayonet bends. Creates right hand or left hand step-up or stepdown at 1/2, 3/4, or 1mm increments.

Bi24-155
"V" bend stop special design makes 1mm "v" bends to shorten archwires or provide a positive stop. Excellent for placing stops in titanium wires. For round or rectangular wires up to .025"

Bi24-156
Angle how plier efficient utility plier with serrated beaks for a firm grip. 45 angled tips to access hand to reach areas.

Bi24-157
Weingardt plier serrated tips hold wires firmly at a convenient working angle. Tapered beaks fit easily between brackets and hard to reach areas. Our most popular utility plier.

DENTAL IMPLANT INSTRUMENTS

DENTAL IMPLANT INSTRUMENTS

Instruments for dental implants are made of high quality stainless steel.

Our line of instruments include, but is not limited to, the following products:

Bone Grafting Instruments

- Bone Curettes (SPRATT) – designed for harvesting bone
 - Bone Grinder – used in conjunction with a mallet to grind bone into appropriate particle sizes
 - Bone Basin – weighted bottom design prevents tipping or spilling while mixing bone or other bone grafting materials
 - Bone Compactors – feature serrated tips for compacting bone
- ### Scalpels & Biopsy Punches
- Scalpels – offers convenience of a disposable with razor sharp cutting edge for superior cutting
 - Biopsy Punches – designed at a steeper angle to ensure a finely honed, sharper edge
- ### Bone Spreading Chisels
- Freer Chisels – double or single cut tips used for widening ridges during implant preparations
 - Graduated Chisels – feature reference markings for measurement during a bone ridge augmentation and are available in straight and curved patterns

Osteotomes

- Concave Osteotomes – break the floor of the maxillary sinus through the implant cavity and are available in curved (off set) and straight (with or without stops)
- Convex Osteotomes – raise the floor of the maxillary sinus and are available in curved (off set) and straight patterns (with or without stops)
- Progressive Osteotomes – designed to prepare the implant site in the maxillary area where bone density is 3 or 4
- Bone Spreading Osteotomes – sharp or blunt configurations for progressive circumferential expansion of the implant site

Sinus Lift Instruments

- Sinus Lift Curettes and Elevators – lightweight, wide diameter stainless steel hand instruments lift the sinus membrane for bone augmentation procedures

Gauges & Calipers

- Gauges & Calipers – various measuring devices available to determine appropriate length, width, and distance for implant procedures

Collagen Products

- Collagen wound dressing product offering includes products.

Sterilization Trays

- Sterilization Trays – designed to protect and store instruments during sterilization, transportation and storage

If an implant cannot be set, since the diameter of the jaw is not sufficient, a piece of bone has to be implanted. The additional bone is extracted e.g. from the lower jaw. The bone piece is then locked onto the compound area with the straight forceps (front tooth sector).
